### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Applicant's representative, Keith McWha (#44,235) on May 05, 2009.

The application has been amended as follows:

Claim 1, line 19, delete "the".

Claim 1, line 25, delete "of".

Claim 1, line 27, delete "of" from "minus of differential".

Claim 1, line 29, delete "or".

Claim 1, line 31, delete "of" from "plus of differential".

2. Claims 1, 2, 4, 5 and 8 (renumbered as 1-5) are allowed.

3. The following is an examiner's statement of reasons for allowance: the prior art of record does not teach predetermining a first threshold of lowest stained density, predetermining a second threshold of highest blurred density, predetermining a first limit of minus differential density independently of the first threshold of lowest stained density for inspection of shortage of printed density, predetermining a second limit of plus

Art Unit: 2624

differential density independently of the second threshold of highest blurred density for inspection of excess of printed density, *the first and second thresholds and the first and second limits having different numerical values from one another*, as stated in claim 1, combined with other features and elements of the claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### **35 USC § 101**

4. The method of claim 1 requires comparing inspection data with reference data "at every pixel for recognition of difference" and deciding that there is a shortage or excess of printed density when "the difference exceeds the first or second limit" of differential density. The claimed comparison and decision is performed by a computer in that only a computer can execute computationally complex processing "at every pixel" and realize the intended purpose of the invention. A reasonable interpretation of the specification indicates that this step, in addition to the other recited steps, require a programmed computer in order to accomplish the intended purpose of the invention, and there is NO disclosed indication of manual and/or mental activity involved.

Therefore, claim 1 is tied to a machine and thus a statutory process.

***Conclusion***
